

Today we are learning about **doubling**.

Can you remember what we do if we **double** something?

Here are the 3 goats in their field.

If another 3 goats join them in the field the number of goats will have doubled. Doubling numbers means having two groups of the same number.

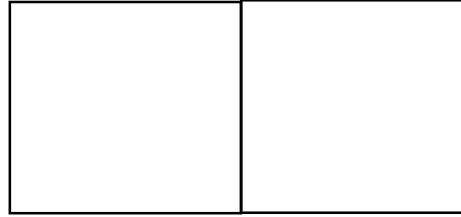

So **3 and 3 makes 6 altogether**

$$3+3=6$$

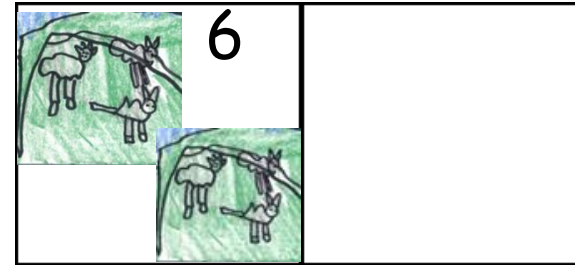

**double 3 is 6**

Now you are going to do some doubling. First fold a piece of paper in half:

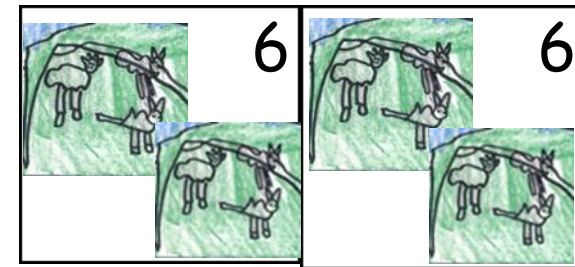

Then decide how many goats are going to be in the field to start with.  
Draw the goats and write the number on one side of the paper.  
Top tip: Pick a number that is less than 10!

Now draw the same number on the other side.  
How many altogether?

Write your number sentence.  $6+6=12$   
double 6 is 12

Now you could have a try at some doubling challenges. Some of them are practical, some of them have some drawing - take a look to practise your skills!
